

instakit

1-acre, all-inclusive drip irrigation system

Why InstaKit ?

Generally, whenever farmers decide to install drip irrigation systems in their farms, the biggest question that arises in their mind is how to arrange for various drip irrigation components like driptape, venturi, PVC fittings, accessories, filter, etc. And even if all these components are arranged, the next question on their mind is how to assemble them accurately and in the least possible time. The only answer to all these questions and concerns is InstaKit from Dripteck, the first 1-acre all inclusive drip irrigation system in India.

HEAD UNIT

SUB UNIT

DRIFTAPE

- For the first time in India, 1-acre portable drip irrigation system with flexible layflat submain
- Assemble entire system in less than 3 hours
- All components in one set, including fertigation
- High quality laser-punched driptape
- Specially designed for high performance at low pressure

drip TECH
Best value drip irrigation
Designed in USA

Dripteck - best value drip irrigation, designed in USA

The three major components of InstaKit

- **Head Unit** - Consists of bypass, venturi, filter, splitter, etc
- **Sub Unit** - Consists of layflat connector, layflat submain, special takeoffs, joiners, flush valves etc
- **Driptape** - Consists of driptape sufficient for 1 acre with 4 foot row spacing

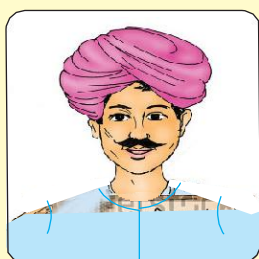

Due to special color coding on the components, a farmer can install the system accurately without help from experts and in less than 3 hours.

All the necessary PVC fittings along with submain punching tool are included in InstaKit, hence the trouble of frequently visiting shops can be avoided.

Manufactured from high quality virgin material, for 4 - year life in the field.

- Due to laser punched driptape, there is uniform distribution of water
- Uniform distribution of water leads to increased yield & water savings
- Average 70% water savings
